

APT training at your own pace!

Our APT Learning Center hosted at Thinkific provides more than 20 hours of video content covering all areas of Atom Probe Tomography

Our full basic training program is available for all users at an institution with a current service contract, or users with eligibility under the AP Suite access program. Each user can keep track of their own progress, and can review the video content at any time. Example data is provided so that users can practice the data analysis features that are covered in the modules. We cover data acquisition specific content on multiple platforms, including the LEAP 5000 and 6000, Invivo 6000, and EIKOS atom probes. Our team at CAMECA is excited to train our atom probe users in the features of our software as well as the basics of atom probe tomography.

Our Basic Training courses include:

- AP Suite Basics
- Specimen Preparation and Handling
- Theory, Instrumentation, & Process
- IVAS 6 Reconstruction Wizard
- AP Suite Data Analysis
- Data Acquisition

Currently our basic training courses contain 20 hours of video content, with new and more advanced topics being added regularly. Additional content is available for users with specific options or interests such as Automation, Vacuum Cryo Transfer Module, etc.

Request to be enrolled in courses here: <https://www.atomprobe.com/keyaplinks/apt-training>

After your eligibility is confirmed, you will get an email from the site inviting you to create an account and get started.
